

Dr. Eric Bang received his Doctorate of Optometry in 1995 from the Pennsylvania College of Optometry, located in Philadelphia, PA. During his Optometric Internships, he studied developmental vision in Philadelphia, PA, and specialty contact lenses and ocular disease in Charleston, SC.

Dr. Bang is a member of the College of Optometrists in Vision Development (COVD), an organization dedicated to pediatric vision and vision therapy. He is also part of the Neuro-Optometric Rehabilitation Association (NORA), an organization dedicated to serving patients who have visual, physical and cognitive disabilities as a result of an acquired brain injury. Additionally, Dr. Bang is a clinical associate of the Optometric Extension Program Foundation

Owing to his passion for improving the vision of children, Dr. Eric Bang has extensively studied topics such as the use of vision therapy to improve reading skills, and has lectured paraprofessionals and the general public on the visual care of children, the importance of vision in personal development, and options for controlling nearsightedness.

Ortho-K:

a safe, inexpensive alternative to refractive surgery

Wake up to clear, comfortable vision without eyeglasses, surgery, or conventional contact lenses.

Locally-owned and Operated

HOW IT WORKS

Ortho-K is the controlled re-shaping of the cornea to eliminate refractive error by using specially designed rigid gas permeable contact lenses.

Lenses are worn overnight and removed upon waking, providing clear unaided visual acuity for all waking hours.

For us, a successful result is all day visual acuity without lenses with minimal or no corneal, eyelid, and conjunctival health issues.

ORTHO-K OFFERS A SAFE, LESS EXPENSIVE ALTERNATIVE TO SURGERY

The FDA has determined that Ortho-K is a safe and effective procedure for the temporary reduction of myopia.

Ortho-K (short for Orthokeratology) goes by a number of different names, among them Corneal Molding, Corneal Refractive Therapy (CRT), and "eye retainers." Developed over the past 50 years, Ortho-K has gained wide recognition as a safer and less expensive alternative to LASIK refractive surgery. Ortho-K lenses are designed for people of all ages to temporarily eliminate myopia, hyperopia, astigmatism, and presbyopia. Most exciting, it is used to control the progression of myopia in children and teens.

WHAT IS INCLUDED IN AN ORTHO-K FITTING & FOLLOW-UP?

Initial measurements, case evaluation, training on lens insertion, removal and care, and all follow-up visits needed to be successful until the next yearly eye exam & Ortho-K evaluation.

Also:

- One set of Ortho-K lenses.
- Starter care kit including cleaning, rinsing, disinfecting, storage solution, and case.

Non-scheduled and non-routine office visits requiring medical treatment (e.g. an eye infection) are not included in the initial fee, but will typically be covered by your medical insurance
